

Dev Shah

Senior QA Engineer — SDET

Bengaluru, India | +91 96621 22232 | devshah262002@gmail.com | linkedin.com/in/dev-shah-654777389

SUMMARY

Senior QA Engineer and SDET who owns quality end to end — test strategy, automation across web, Android and desktop, and WCAG 2.1 / 2.2 AA accessibility. Currently the quality owner on a live React 19 and Hono / PostgreSQL platform, where I authored a 1,028-case test suite across 22 modules, built the team's test-management tooling as a deployed product, and merged 206 commits of feature and fix code into the product itself.

EXPERIENCE

Senior QA Engineer / Full-Stack SDET — Codesage (deployed at EnAble India)

Bengaluru, India | Feb 2026 - Present | Full-time

- Own end-to-end quality on MEL, a platform helping people with disabilities through skill training, employment and post-placement support — a React 19 and Hono / PostgreSQL product shipping to web, Windows desktop and Android in three languages (EN / HI / KN).
- Authored and maintain a **1,028-case test suite** across 22 modules — Candidates, Trainings, Courses, Centres, Campaigns, Settlements, Workplace Support, Committees, Master Data and Reports — with per-role variants for nine role types.
- Designed and built the **MEL Test Dashboard**, a deployed test-management product unifying test cases, runs and Jira, with a Playwright watcher that executes queued tests unattended and posts results back with evidence. Sole author, 95 commits.
- Extended regression coverage to the Tauri Android and Windows desktop builds through a self-contained Appium and emulator harness with a Docker-based APK pipeline.
- Led accessibility across the product: axe-core automation, manual keyboard and screen-reader audits, and responsive verification from 320px to 1920px at 200-400% zoom.
- Found and drove fixes for defects that passed happy-path scripts — an offline sync cursor silently dropping same-timestamp rows, unique-violation errors surfacing as opaque 500s, and future dates accepted as a date of birth.
- Shipped **206 merged commits** (~50,000 lines) of feature and fix code across the frontend and backend, including the settlement follow-up scheduler, an app-wide centre/state scope switcher, server-side master-data search, and committee PDF export.
- Drove UAT cycles end to end and produced the sign-off packages, release notes and production readiness reports the client signs against.

QA Automation Engineer — Ace Infoway Pvt. Ltd.

Ahmedabad, India | Nov 2023 - Jan 2026 | Full-time

- Built and maintained Selenium and Playwright automation frameworks on the Page Object Model with Cucumber BDD, covering web, Android and iOS from a single unified codebase.
- Automated **70% of regression testing**, cutting manual effort per sprint by 50%.
- Executed **600+ test cases per release** at 100% functional coverage, with consistently bug-free production builds.
- Performed database validation with SQL and MS SQL, and integrated TestRigor for scriptless, self-healing automation.

SELECTED PROJECTS

- **MEL Platform (EnAble India)** — four-repository full-stack system with role-based access, a tri-lingual UI, and an offline-first Android client. Quality owner.
- **MEL Test Dashboard** — serverless test-management product on Vercel and Upstash Redis, with a Playwright runner and two-way Jira REST integration. Sole author.
- **DISH — Disability Information & Support Hub** — AI search assistant for people with disabilities across eight repositories. Owned the WCAG 2.1 AA audit and the Playwright functional suite.
- **SupplAI** — logistics planning and live fleet tracking with GPS telematics. End-to-end Playwright regression, filter edge cases and cross-site-scripting probes.
- **Rotawiz** — Australian healthcare rostering product. End-to-end automation across web, Android and iOS from one codebase.
- **Biomap** — wellness platform. Role-based automation across Admin, Relationship Manager, Subject Matter Expert and Client using reusable, data-driven components.
- **SelfDrive** and **Smoker Zone** — web and mobile QA across the release cycle.

SKILLS

Test automation: Playwright, Selenium WebDriver, Appium, TestNG, Cucumber (BDD), Page Object Model, REST API automation, Postman, TestRigor, Vitest

QA practice: Test planning and strategy, end-to-end testing (web and mobile), manual and regression testing, functional and UI testing, UAT coordination and sign-off, release readiness reporting, database validation (SQL / MS SQL), cross-platform testing (web / Android / iOS / desktop), security spot-checks (XSS, input validation)

Accessibility: WCAG 2.1 / 2.2 AA, axe-core, keyboard and focus-order audits, screen-reader testing, inclusive design testing, responsive testing 320px-1920px, 200-400% zoom reflow

Engineering: TypeScript, React 19, Hono, Node.js, PostgreSQL, Drizzle ORM, Redis, Python, Tauri, Docker

Tools and process: Git, GitHub, GitLab, Jira, Agile / Scrum (SDLC / STLC), Maven, Vercel, Zoho

EDUCATION

B.Tech, Computer Engineering — CHARUSAT (Charotar University of Science & Technology), Gujarat | Nov 2020 - Jan 2024

TRAINING AND LANGUAGES

Training: Playwright Automation (self-directed); Selenium WebDriver with Java (Udemy); Agile Testing Foundations (self-directed)

Languages: English (Proficient), Hindi (Native)
